We say, 9 in 62, 6 times, and write the 6 over the 2 in the dividend. We then multiply the divisor 9 by the 6, and subtract the product 54 from 62. To the remainder 8, we annex 1, the last figure in the dividend, making 81. We say, 9 in 81, 9 times, and write the 9 over the 1 in the dividend. We then multiply the divisor 9 by the last figure in the quotient, or 9, and write the product 81 under the 81. As there is no remainder, the division is exact. Hahvey s Ar. I--11 To The Teacher. Pupils should see clearly that the mental work is exactly the same in both forms of division; but that in the Long Division form, tho work of multiplying, subtracting, and annexing is all written out, while in the Short Division form the results are carried in the mind without writing anything except the quotient figures. In Long Division it is best to write each of the quotient figures over the last figure of the partial dividend used to produce it, as there is less liability of error in bringing down the proper figure for the next partial dividend. This is where beginners often make mistakes. Solve the following by both Short Division and Long Division. Learn: The remainder after each partial division must be less than the divisor. 6. 7. 8. 9. 11)27984 12)98904 12)6576 11)2365...
