

Lessons in Elementary Practical Physics; General Physical Processes

Filesize: 5.46 MB

Reviews

Basically no words to clarify. Of course, it is perform, still an amazing and interesting literature. Its been printed in an exceptionally basic way which is only soon after i finished reading through this ebook where actually altered me, change the way i really believe.

(Newton Runolfsson)

LESSONS IN ELEMENTARY PRACTICAL PHYSICS; GENERAL PHYSICAL PROCESSES

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1904 Excerpt: .Table Q. Value Of Degrees Of Baume s Hydrometer For Heavy Liquids1 For 17-5 C. The hydrometer, as originally proposed by Bauine, for liquids lighter than water, has the zero of the scale at the bottom of the stem, the point being fixed by a solution of 10 parts of common salt to 90 parts by weight of water, whilst the second fixed point is obtained by immersion in distilled water. This latter point is called 10, the interval is divided into 10 equal parts and the graduation is continued upwards. As with the other instrument, the true value of a division is uncertain. We shall follow the values obtained by Gerlach, using the formula
$$= 145 - 88 \frac{135 - 88}{100} + NV$$
 Taken from Gerlach, Dingler s Journal, 1870. 98. Harmonically-divided Densimeters.--If a densimeter could be constructed in which the successive divisions expressed equal difference of density, it would possess an advantage over the instrument whose construction we have described, for it would be much easier to read, and the use of awkward numbers would be avoided. Unfortunately, the accurate graduation of such an instrument is decidedly complicated. We know that if V be the volume of the part immersed in a liquid of density S , then $VS = W$ where W is the weight of the hydrometer. In like manner, for liquids of densities S_1, S_2 we have $V_1S_1 = W$ and $V_2S_2 = W$, whence $V_1S_1 = V_2S_2 = W$, etc. Now...
